SKILLS

AI & Machine Learning

- Machine Learning Model Design
- AI Integration in Applications
- Predictive Analytics & Data Pipelines
- Industrial Fault-Detection Models

Full Stack Web Development

- React, Vite & Next.js
- TypeScript & JavaScript
- Node.js
- PHP & C++
- Python
- SQL (MySQL) & MongoDB

Cloud & Cybersecurity

- Scalable Cloud Deployments
- Secure-by-Design Frameworks
- Data Encryption Compliance

QA & Software Testing

- Manual & Regression Testing
- Selenium Test Automation
- Postman (API Testing)
- Test Case Design
- Bug Tracking (Jira)

Hardware & Telemetry

- PCB Diagnostics & Repair
- GPS Telemetry Systems
- IoT & Firmware (MQTT/HTTP)
- CAN-Bus & Serial Communication
- Firmware Flashing & Validation

IT & Tools

- IT Support & Troubleshooting
- Git
- phpMyAdmin
- Resend (Email API)
- ISO Standards

EDUCATION

Full Stack Web Developer

Digital House | 2023 | Mendoza, Argentina

Electronic Technician

Instituto Técnico | 2004

LANGUAGES

Spanish — Native | English — Fluent | Italian — Fluent

PROFILE

Full Stack Developer and AI/ML Engineer, Founder & CTO of Puma Code, with 10+ years of cross-disciplinary experience spanning embedded electronics, industrial telemetry, hardware QA, and modern software engineering. In under 6 months, founded and built a software studio from zero, independently designing and shipping 5 production platforms covering IoT sensor hardware, machine learning models, telemetry data pipelines, and full-stack SaaS web applications. Comfortable owning the complete pipeline end-to-end: from PCB and firmware, through data ingestion and ML model training, to production-grade React/Next.js and Node.js applications. Strong track record in manual and automated testing (Selenium), API testing (Postman), cybersecurity, and scalable cloud infrastructure.

PROFESSIONAL EXPERIENCE

Puma-Code | Founder & CTO / Lead Full Stack & AI Engineer (Remote)

05/2026 – Present | Mendoza, Argentina

- Founded and independently built Puma Code — 5 production platforms shipped in under 6 months, spanning IoT hardware, ML, and full-stack SaaS.
- AgroTech: precision viticulture IoT + ML platform — LoRa/ESP32 sensor network, ML-based frost prediction, computer-vision pest detection (YOLOv11).
- Kalyber: fleet telemetry SaaS — real-time GPS/OBD tracking, driver behavior scoring, predictive maintenance, custom GT06/JT808 protocol integrations.
- Mendozapp: AI-powered tourism PWA — geolocation proximity alerts, AI-narrated points of interest, AI trip-itinerary generator.
- Delivered production platforms for external clients: Good Trip Car Rentals (booking/pricing engine, payments) and Preciso.tech (fuel-anomaly-detection SaaS for a 1,241-vehicle fleet).
- Own the full delivery lifecycle: architecture, hardware/firmware, ML model design, deployment (Vercel/Render/Cloudflare/Railway), security, and performance.

Independent Software Consultancy | Full Stack Technical Consultant

(Remote/Self-employed)

04/2024 – 04/2026 | Bristol, UK

- Designed and delivered custom web applications for SMBs, including booking platforms and internal administrative dashboards.
- Built and maintained pricing engines, booking flows, and admin panels using React/Vite, Node/Express, and MySQL.

Novanta Inc. | Hardware Systems Technician

09/2023 – 03/2024 | Barcelona, Spain

- Assembly, calibration, and testing of high-precision industrial hardware.
- Circuit-level troubleshooting to resolve issues during the testing lifecycle and minimize production downtime.
- Ensured compliance with ISO quality standards.

Sitrack.com | Production Operator

06/2022 – 08/2023 | Mendoza, Argentina (On-site)

- Tested and programmed GPS/microchip hardware on the production line; validated equipment before installation.
- Collaborated with the team to improve production efficiency and quality.

Sitrack.com | Quality Control Specialist

03/2006 – 05/2014 | Mendoza, Argentina & Santiago, Chile

- Tested and ran new scripts and programmed GPS hardware devices on the production line.
- Trained new operators during a period of strong company growth.
